## Application for 4G African Broadband Forum Membership

### **The 4G Forum will**

- Advertise your events and conferences and get you free invitations to participate in regional and Africa wide telecommunications shows.
- Place your company name, logo and link to your website prominently on our well known and high in search engine captures.
- Keep you informed via news and emails of reforms in your specific industry and country including regulatory changes, mergers, management changes
- Find those managers and engineers that you desperately need to build, commission, optimise systems and networks and run your business.
- Train them through collaboration with the Commonwealth Telecommunications Organisation CTO, Cisco, GRAPA, Research ICT Africa and others.

After joining and in order to better understand and satisfy your needs please just send me a short note what other needs you want fulfilled. These amongst other could be:

1. Direct contact with operators or vendors in which African countries?
2. Notification of competitive changes in which areas and countries?
3. Advice of regulatory changes in which countries?
4. Location of staff. Now or later? In what specialties?
5. Handsets and devices?
6. Specific liaison with RIA who conducts public-interest research on ICT policy and regulation that responds to national needs. It provides African researchers, governments, regulators, operators, community organizations and trade unions with the information and analysis required to develop innovative and appropriate policies, effective implementation and successful network operations that can contribute to sustainable development.

The 4G Forum helps organisations to succeed in Africa. Our specialty interests are to support you in serving your customer base better at a profit for your stakeholders. This may be in the new technical fields of WebRTC, RCS, LTE, optical fiber and satellite feed changes or in business models to share in OTT revenues. You may need an industry expert witness for a litigation. You may need Market Research. You may need business development into a specific area. You may have a challenge in revenue assurance or an undercover fraud investigation. Depending on the size of the task these may be free. In other cases we will confidentially find you a competent and knowledgeable independent consultant to liaise directly with you.

**Whatever your needs we aim to satisfy you in your endeavours and to make you want to continue being an ongoing active and satisfied member of the forum for years to come.**

Incorporated in South Africa in as a Closed Corporation; Registration number 2005/176277/23 ; VAT #4930252343 Tax #9049098198
